Redstring

World-building, with every thread connected

For novelists, screenwriters, lore keepers and brand storytellers
(video games coming soon)

Chapter 3 changed. Did chapter 20?
Redstring traces the change and flags every scene, arc and fact it touches.

The fans found it before you did.
Every new scene, from every writer, is checked against established canon, and a contradiction is flagged as it goes in.

The canon lives in one person's head.
Characters, places, events and the threads between them sit on one corkboard, every fact with its source, open to the whole room.

The bible says north. Season four said south.
Your world bible is exported from the world itself, to EPUB or Obsidian, so it never drifts from the canon.

WHAT SYSTEMS THINKING IS

A story world is a network: pull one thread, and every thread tied to it moves.

HOW SOSX HELPS

Research
Canon from your drafts, each fact sourced.

Build
Your world as one typed corkboard.

Test
Try a story idea against the canon first.

Write
Story options and visuals, drafted from your world.

sosx.ai

THE PROBLEMS IT SOLVES

> “Our world has outgrown its wiki.”

> “A character was in two places in the same week, and nobody noticed until the read-through.”

> “Every new writer spends weeks learning the canon.”

> “One late change to a storyline quietly broke three others.”

KEPT CURRENT

Flags a new scene that contradicts established canon, as soon as it is written in.

AN ILLUSTRATIVE EXAMPLE

A soap with six households: move one wedding back a month, and the board shows the funeral and the alibi whose dates depended on it.
